

<details>

What it does:

Creates a collapsible section that users can expand or hide.

Why it exists:

To show extra information only when needed, improving page organization and user experience.

Real-world use cases:

- FAQs
- Product information sections
- Instructions or help menus

<figure> and <figcaption>

What they do:

<figure> groups media content (image, chart, diagram).

<figcaption> provides a caption or description for that content.

Why they exist:

To connect visual content with its description semantically.

Real-world use cases:

- Blog images with captions
- Scientific diagrams
- Data charts in reports

<mark>

What it does:

Highlights important or relevant text (like a highlighter pen).

Why it exists:

To draw attention to specific content or keywords.

Real-world use cases:

- Search results highlighting matched words
- Important notes in articles
- Study materials

<time>

What it does:

Represents dates and time in a machine-readable format.

Why it exists:

Helps browsers, search engines, and software understand time information accurately.

Real-world use cases:

- Event schedules
- Deadlines
- Blog post publish dates
- Booking systems

<progress>

What it does:

Displays task completion progress visually.

Why it exists:

To show how much of a process is complete.

Real-world use cases:

- File uploads
- Download status
- Course completion trackers
- Form completion progress
